

Module specification

When printed this becomes an uncontrolled document. Please access the **Module Directory** for the most up to date version by clicking on the following link: [Module directory](#)

Module Code	ANM435
Module Title	Introduction to Ecology
Level	4
Credit value	20
Faculty	FSLS
HECoS Code	100347
Cost Code	GAAN

Programmes in which module to be offered

Programme title	Is the module core or option for this programme
FdSc Practical Wildlife Management	Core
FdSc Animal Behaviour Welfare and Conservation	Core
BSc (Hons) Animal Behaviour Welfare and Conservation	Core

Pre-requisites

N/A

Breakdown of module hours

Learning and teaching hours	30 hrs
Placement tutor support	0 hrs
Supervised learning e.g. practical classes, workshops	6 hrs
Project supervision (level 6 projects and dissertation modules only)	0 hrs
Total active learning and teaching hours	36 hrs
Placement / work based learning	0 hrs
Guided independent study	164 hrs
Module duration (total hours)	200 hrs

For office use only	
Initial approval date	12/05/2022

For office use only	
With effect from date	September 2023
Date and details of revision	Revalidated for Sept 2024 provision – revised module hours
Version number	2

Module aims

This module aims to introduce students to the relationship between organisms and the environment around them. Key ecological definitions will be explained, and students will understand the variety of complex biotic and abiotic interactions that influence the abundance and distribution of organisms.

Module Learning Outcomes - at the end of this module, students will be able to:

1	Identify the earth's natural physical processes
2	Recognise the earth's living environment of individuals and communities
3	Describe world biomes, biogeographical regions, and habitats

Assessment

Indicative Assessment Tasks:

This section outlines the type of assessment task the student will be expected to complete as part of the module. More details will be made available in the relevant academic year module handbook.

Assessment 1: In class test: Identify the earth's natural physical processes, MCQ's, short answer and problem-based questions. (1 hr)

Assessment 2: Poster: The biotic and abiotic factors that influence the distribution and abundance of a chosen species (2000 word equivalent)

Assessment number	Learning Outcomes to be met	Type of assessment	Weighting (%)
1	1	In-class test	40
2	2, 3	Coursework	60

Derogations

N/A

Learning and Teaching Strategies

A blended format will be utilised to deliver this module. An active and inclusive learning environment aligned to Universities ALF will enable flexible, accessible and individualised

learning opportunities for students. This approach will include both synchronous and asynchronous learning. Practical sessions and workshops will enable students to implement theory in practice. Assessments will take place midpoint and at the end of the module.

Indicative Syllabus Outline

Earth's natural physical processes; energy flow, nutrient cycling, photosynthesis, pollination, decomposition. Abiotic factors; hydrology, geomorphology, soil development and soil characteristics, rainfall, humidity, temperature, pH, climate. Natural and anthropogenic factors of change.

Individuals, species, populations, communities, meta-populations, saprophytes, heterotrophs, autotrophs, carnivores, herbivores, omnivores, piscivores. Population dynamics; life histories, population growth rate, survivorship curve, carrying capacity, migration, dispersal, competition, predation. Community ecology; food webs, trophic structures, inter-specific and intra-specific relationships. Natural and anthropogenic factors of change.

World biomes, biogeographical regions and habitats; forests, wetlands, coasts, oceans, grasslands, deserts, polar, boreal, temperate, tropical and sub-tropical, man-made habitats (e.g., agriculture and urban). Natural and anthropogenic factors of change.

Indicative Bibliography:

Please note the essential reads and other indicative reading are subject to annual review and update.

Essential Reads

Begon, M. and Townsend, C. R. (2021), *Ecology: From Individuals to Ecosystems* (5th Edition). New Jersey: Wiley-Blackwell.

Other indicative reading

Amundson, R. (2021), *Introduction to the Biogeochemistry of Soils*. Cambridge: Cambridge University Press.

Lomolino, M. V. (2020), *Biogeography: A Very Short Introduction (Very Short Introductions)*. Oxford: Oxford University Press.

Wilkinson, D. (2021), *Ecology and Natural History*. Glasgow: William Collins.

Employability – the University Skills Framework

Each module and degree programme are designed to support learners as they develop their graduate skills aligned to the University Skills Framework.

Using the philosophies of the Active Learning Framework (ALF) our 10 skills are embedded within programmes complementing core academic subject knowledge and understanding. Through continuous self-assessment students own their individual skills journey and enhance their employability and career prospects.

This Module forms part of a degree programme that has been mapped against the University Skills Framework.

The Wrexham University Skills Framework Level Descriptors: An incremental and progressive approach.

Learners can use this document to identify where and how they are building skills and how they can develop examples of their success.
