

MODULE SPECIFICATION PROFORMA

<b>Module Title:</b>	Introduction to Experimental Design and Mathematical Analysis	<b>Level:</b>	3	<b>Credit Value:</b>	20
----------------------	---	---------------	---	----------------------	----

<b>Module code:</b>	LND306	<b>Is this a new module?</b>	No	<b>Code of module being replaced:</b>	N/A
---------------------	--------	------------------------------	----	---------------------------------------	-----

<b>Cost Centre(s):</b>	GAHT	<b>JACS3 code:</b>	N/A
------------------------	------	--------------------	-----

<b>With effect from:</b>	November 16
--------------------------	-------------

<b>School:</b>	Social & Life Sciences – Land based	<b>Module Leader:</b>	Dr David Skydmore
----------------	-------------------------------------	-----------------------	-------------------

Scheduled learning and teaching hours	50 hrs
Guided independent study	150 hrs
Placement	0 hrs
<b>Module duration (total hours)</b>	<b>200 hrs</b>

<b>Programme(s) in which to be offered</b>	Core	Option
BSc (Hons) Wildlife and Plant Biology (including Foundation Yr)	✓	<input type="checkbox"/>
BSc (Hons) Equine Science and Welfare Management (including Foundation Yr)	✓	<input type="checkbox"/>
FdSc Animal Studies (including Foundation Yr)	✓	<input type="checkbox"/>
BSc (Hons) Forensic Science (including Foundation Yr)	✓	<input type="checkbox"/>
BSc (Hons) Geography, Ecology and Environment (including Foundation Yr)	✓	<input type="checkbox"/>
BSc (Hons) Chemistry with Green Nanotechnology (including Foundation Yr)	✓	<input type="checkbox"/>

<b>Pre-requisites</b>
None

Office use only

Initial approval: September 14

APSC approval of modification: November 16

Version: 2

Have any derogations received LTQC approval?

Yes  No  N/A ✓

If new module, remove previous module spec from directory?

Yes  No

### Module Aims

- To appreciate the use of scientific methods and concepts
- To understand the principles of experimental design
- To appreciate methods in the interpretation and analysis of data

### Intended Learning Outcomes

Key skills for employability

- KS1 Written, oral and media communication skills  
 KS2 Leadership, team working and networking skills  
 KS3 Opportunity, creativity and problem solving skills  
 KS4 Information technology skills and digital literacy  
 KS5 Information management skills  
 KS6 Research skills  
 KS7 Intercultural and sustainability skills  
 KS8 Career management skills  
 KS9 Learning to learn (managing personal and professional development, self-management)  
 KS10 Numeracy

At the end of this module, students will be able to		Key Skills	
1	Explain and apply mathematical notation and algebraic expressions.	KS1	KS10
		KS2	
		KS6	
2	Draw graphs and determine their gradients.	KS1	KS10
		KS3	
		KS4	
3	Interpret basic statistics and examples of probability and demonstrate their applications in science	KS1	KS6
		KS4	KS10
		KS5	
4	Design a laboratory experiment and collect observations	KS1	KS6
		KS3	KS10
		KS5	
5	Apply principles in to the analysis and interpretation of data	KS1	KS10
		KS3	
		KS6	

Transferable skills and other attributes

- Problem solving
- Mathematical applications
- Design, analysis, and synthesis
- ICT
- Presentation skills

**Derogations**

None

**Assessment:**

Assessment One: is by means of a Presentation of a data analysis and interpretation on evidence presented in a textbook or scientific journal.

Assessment Two: Exam on mathematical/statistical problems. This will be conducted as an open book assessment

Assessment number	Learning Outcomes to be met	Type of assessment	Weighting (%)	Duration (if exam)	Word count (or equivalent if appropriate)
1	3,4,5	Presentation	50	10 mins	
2	1,2,3	Examination	50	1.5 hrs	

**Learning and Teaching Strategies:**

The module will be presented to students through a series of lectures and learning reinforced through module tutor guided and self-directed study and interactive problem-solving tutorial sessions utilising laboratory equipment where appropriate.

Formative assessment involves tutorial questions and summative assessment is by In Class Test and presentation.

**Syllabus outline:**

Use of theories and models to explain observations and cause and effect in science

Numbers, scientific notation and significant figures.  
Algebra and manipulation of algebraic expressions.  
Powers, indices, exponentials and logarithms.  
Some simple rules of differentiation.  
Integration: reversing differentiation.

Experimental design  
Dependent and independent variables  
Accuracy and precision  
Sampling

Replication  
Reproducibility  
Data analysis  
Producing and interpreting graphs  
Averages  
Percentages  
Introduction to probability.  
Use of statistics in experimental analysis  
Normal distribution.  
Basic t-test.

Use of ICT in data analysis
