

## Module specification

When printed this becomes an uncontrolled document. Please access the **Module Directory** for the most up to date version by clicking on the following link: [Module directory](#)

<b>Module Code</b>	COM757
<b>Module Title</b>	Artificial Intelligence
<b>Level</b>	7
<b>Credit value</b>	20
<b>Faculty</b>	FACE
<b>HECoS Code</b>	100359
<b>Cost Code</b>	GACP
<b>Pre-requisite module</b>	N/A

### Programmes in which module to be offered

<b>Programme title</b>	<b>Core/Optional/Standalone</b>
MSc Computer Science	Core
MSc Computer Science with Advanced Practice	Core
MSc Artificial Intelligence	Core
MSc Computing for Business	Core

### Breakdown of module hours

Learning and teaching hours	10 hrs
Placement tutor support hours	0 hrs
Supervised learning hours e.g. practical classes, workshops	11 hrs
Project supervision hours	0 hrs
<b>Active learning and teaching hours total</b>	<b>21 hrs</b>
Placement hours	0 hrs
Guided independent study hours	179 hrs
<b>Module duration (Total hours)</b>	<b>200 hrs</b>

### Module aims

This module aims to provide students with a deep understanding of advanced concepts, algorithms, and techniques used in artificial intelligence (AI), as well as their ethical and societal implications. Students will develop practical skills in designing and evaluating complex AI systems to solve real-world problems, using advanced programming languages, tools, and frameworks. Through independent research, critical analysis, and effective communication,

students will be able to contribute to the knowledge and practice of AI and its applications in various domains.

### Module Learning Outcomes

At the end of this module, students will be able to:

<b>1</b>	Design and implement complex AI systems to solve real-world problems, considering ethical and societal implications.
<b>2</b>	Critically evaluate contemporary and emerging AI research and methods.
<b>3</b>	Synthesize and disseminate advanced AI concepts and research to both technical and non-technical audiences.

### Assessment

Indicative Assessment Tasks:

The assessment for this module is designed to evaluate students' understanding of theoretical concepts, their ability to critically analyse AI methodologies, and their communication skills. Students will complete written assignments that involve exploring and evaluating AI theories, frameworks, and models. The assignment will assess their ability to apply theoretical knowledge to real-world scenarios and their proficiency in critically assessing AI literature.

Assessment number	Learning Outcomes to be met	Type of assessment	Duration/Word Count	Weighting (%)	Alternative assessment, if applicable
1	1,2,3	Coursework	5000 Words or Equivalent	100%	

### Derogations

None

### Learning and Teaching Strategies

In line with the Active Learning Framework, this module will be blended digitally with both a VLE and online community. Content will be available for students to access synchronously and asynchronously and may indicatively include first and third-party tutorials and videos, supporting files, online activities any additional content that supports their learning. As this module progresses, the strategies will change to best support a diverse learning environment. Initially, the module will start with a heavier reliance on engaging tutor-led lectures, demonstrations, and workshops to ensure that the students get the relevant threshold concepts. As the module continues experiential and peer learning strategies will be encouraged as the students' progress with their portfolio work. Assessment will occur throughout the module to build student confidence and self-efficacy in relation to the application of machine learning algorithms and key concepts.

## Welsh Elements

This module is designed to support Welsh-speaking students in line with the Welsh Language Standards. While the primary delivery will be in English, students will have the opportunity to submit assessments, including coursework and projects, in Welsh if preferred. Relevant module materials, such as reading lists, key texts, and guidance, will be available bilingually upon request, ensuring accessibility for all students. Additionally, where possible, guest speakers, case studies, or examples may include references to the Welsh business context, especially in areas such as data use in local industries and Welsh public sector organisations.

The department encourages students to develop bilingual digital skills by incorporating Welsh-language datasets, tools, and resources where appropriate, offering an inclusive learning environment. We also support the development of bilingual visualisation techniques, enabling students to create digital outputs that reflect the Welsh language, should they wish to do so.

## Indicative Syllabus Outline

- Introduction to Artificial Intelligence: history, types, and applications
- Mathematical Foundations of AI: Linear algebra, Calculus, Probability theory, Statistics
- Machine Learning Algorithms: Supervised, unsupervised, and reinforcement learning; decision trees, support vector machines, neural networks, and deep learning
- Natural Language Processing
- Computer Vision: Image classification, Object detection, Segmentation, Tracking
- Robotics: Control theory, Kinematics, dynamics, Robot perception, Planning, and Control
- AI Evaluation and Impact: Metrics for evaluating AI performance, Ethical and Social considerations
- Reinforcement Learning, Transfer Learning, Generative Models, Multi-agent Systems

## Indicative Bibliography

Please note the essential reads and other indicative reading are subject to annual review and update.

### Essential Reads:

- S. Russell & P. Norvig, *Artificial Intelligence: A Modern Approach*, Global Edition, Pearson, 2021.

### Other indicative reading:

- C. O'Neil, *Weapons of Math Destruction: How Big Data Increases Inequality and Threatens Democracy*, Penguin, 2017.
- S. Russell, *Human Compatible: Artificial Intelligence and the Problem of Control*, Allen Lane, 2019.
- N. Bostrom, *Superintelligence: Paths, Dangers, Strategies*, OUP Oxford, 2016.
- P. Domingos, *The Master Algorithm: How the Quest for the Ultimate Learning Machine Will Remake Our World*, Penguin, 2017.
- G. Kasparov & M. Greengard, *Deep Thinking: Where Machine Intelligence Ends and Human Creativity Begins*, 2018.

- M. Tegmark, Life 3.0: Being Human in the Age of Artificial Intelligence, Penguin, 2018

### Administrative Information

For office use only	
Initial approval date	08/11/23
With effect from date	Sept 2024
Date and details of revision	March 2025 – AM2 change of assessment and LO update March 26 Addition of MSc Computing for Business programme title
Version number	3
