

Module specification

When printed this becomes an uncontrolled document. Please access the Module Directory for the most up to date version by clicking on the following link: [Module directory](#)

Module Code	ENG4C5
Module Title	Fundamentals of Electrical Engineering
Level	4
Credit value	20
Faculty	FACE
HECoS Code	100164
Cost Code	GAME
Pre-requisite module	N/A

Programmes in which module to be offered

Programme title	Core/Optional/Standalone
BEng (Hons) Electrical Engineering	Core

Breakdown of module hours

Learning and teaching hours	30 hrs
Placement tutor support hours	0 hrs
Supervised learning hours e.g. practical classes, workshops	30 hrs
Project supervision hours	0 hrs
Active learning and teaching hours total	60 hrs
Placement hours	0 hrs
Guided independent study hours	140 hrs
Module duration (Total hours)	200 hrs

Module aims

This module combines conceptual teaching with guided practical work to strengthen students' understanding of fundamental principles. Learners explore how theoretical knowledge connects with real-world practice through structured experimentation and applied tasks. The approach builds confidence, technical awareness, and the ability to apply knowledge effectively within authentic learning contexts.

This module aims to introduce students to the foundational principles of electrical and electronic engineering, developing their conceptual understanding of components and circuit theories that will support progression to more advanced study within the discipline.

Module Learning Outcomes

At the end of this module, students will be able to:

1	Explain the fundamental principles of electrical and electronic engineering and describe the operation of basic analogue and digital circuit components and systems.
2	Apply appropriate analytical methods to solve electrical calculations and evaluate the performance of simple analogue and digital electronic circuits.
3	Use an integrated or systems approach to investigate, model and interpret the behaviour of electrical and electronic circuits in practical and simulated environments, thereby developing.
4	Communicate technical findings clearly and professionally, demonstrating accurate interpretation of experimental and simulation results.

Assessment

Indicative Assessment Tasks:

This section outlines the type of assessment task the student will be expected to complete as part of the module. More details will be made available in the relevant academic year module handbook.

Assessment 1: Portfolio (75%)

This assessment evaluates the development of fundamental engineering knowledge and practical competence. Students submit a portfolio of evidence derived from practical, laboratory, workshop, or equivalent applied activities undertaken during the module. Evidence may take a range of appropriate forms, including measurements, observations, visual records, and brief technical commentary.

Minimum expectation: The portfolio must demonstrate engagement with a representative range of activities and include sufficient evidence of method, results, and basic interpretation to allow academic judgement of performance and achievement of learning outcomes.

Assessment 2: Oral Presentation

This assessment evaluates students' ability to communicate engineering understanding using appropriate technical content and supporting evidence. Students deliver a structured presentation based on a selected system, topic, or set of activities relevant to the module. The presentation should demonstrate understanding of underlying principles, use of relevant data or evidence, and a basic level of analysis.

Minimum expectation:

The presentation must include appropriate supporting material (such as data, examples, or applications) and demonstrate a clear link to the learning activities of the module.

Assessment number	Learning Outcomes to be met	Type of assessment	Duration/Word Count	Weighting (%)	Alternative assessment, if applicable
1	1-3	Portfolio	Equivalent to 2000 words	75%	N/A
2	4	Presentation	10 minutes	25%	N/A

Derogations

Credits shall be awarded by an Assessment Board for those modules in which a pass mark 40% has been achieved, with a minimum mark of 30% in each assessment element.

Learning and Teaching Strategies

Learning and teaching combine classroom-based instruction with structured laboratory practice to reinforce theoretical understanding through application. Students participate in lectures, workshops, and supervised experiments that link principles to professional practice. Online materials and activities complement face-to-face sessions, supporting reflection and self-paced learning. Tutorials and group discussions promote collaboration and the development of analytical and communication skills.

Welsh Elements

This module will be delivered through the medium of English; however, students have the option to submit their assessments in the medium of Welsh. While this module is not currently offered fully through Welsh, Welsh language support and guidance are available, and some learning materials or tutorial discussions may incorporate Welsh elements where appropriate. To further promote bilingual learning, all students have the opportunity to take the 20-credit Welsh for STEM short course, designed to develop confidence and subject-specific language skills in both English and Welsh.

Indicative Syllabus Outline

Fundamental electrical principles:

Voltage, current, resistance, power, and energy relationships underpinning the operation of electrical systems.

Application of basic electrical calculations:

Use of Ohm's Law, Kirchhoff's Laws, and power relationships to determine analogue circuit behaviour and verify experimental results. Introduction to truth tables and Boolean algebra for the analysis of digital circuits, with interpretation of results within a systems context.

Function of basic electronic components:

Study of resistors, capacitors, inductors, diodes, transistors, and operational amplifiers.
Introduction to digital electronics, including combinational and sequential logic, and their behaviour within circuit systems.

Indicative Bibliography

Please note the essential reads and other indicative reading are subject to annual review and update.

Essential Reads:

J. Bird, Electrical and Electronic Principles and Technology, 7th ed. (Routledge, 2021)

Other indicative reading:

T. R. Kuphaldt, Lessons in Electric Circuits. All About Circuits, 2003. [Online]. Available:
<https://www.allaboutcircuits.com/textbook/>

Plus, various others to be signposted on Moodle.
